

NEWTEST POWERTIMER UPDATE

Newtest Powertimer 300 series testing system is updated with the PowertimerPC software, USB-to-serial adapter kit and a modified connection unit (product code 301200.00).

The Powertimer system has utilized the Palm PDAs (models m105 and Zire) during its lifetime. The Palm PDAs have proven to be very difficult to install and especially, the Palm Zire has been of very poor quality compromising the Powertimer system. Therefore, we have decided to replace the Palm with PC based software.

The Powertimer will be available with the updated features starting 1.8.2006. The system may also be updated with update kit for those customers who already have the Powertimer 300 series system.

System requirements

PowertimerPC requires

- A personal computer with
 - Windows 2000 or later Free USB or serial port
 - CD drive
 - 6 Mb of free space from your hard drive
 - Microsoft .NET Framework 1.1 installed (it is also included on the same CD with PowertimerPC)

A Powertimer measurement hardware with a serial port

The PowertimerPC features:

The PowertimerPC software possesses the same features and functions, as did the Palm Powertimer software on Palm PDAs. The PowertimerPC software is used to edit test groups, subjects and sessions and control the testing. The PowertimerPC user interface is very much like the UI of the Powertimer Analyzer Database. Furthermore, the PowertimerPC has a new feature allowing a **Quick testing mode** without any preliminary information on subjects or groups.

The PowertimerPC records, stores data and test results. For further analysis the data needs to be transferred to the Powertimer Analyzer database as was done with the Palm PDAs. Therefore, the users need to install the current Powertimer software on their PC and update it to version 1.00.339. The PowertimerPC software also retrieves the group and subject data from the Powertimer Analyzer database. For further information please refer to the PowertimerPC user manual.

The PowertimerPC will be available in English, German, French and Spanish. The language mode is chosen in the settings of the PowertimerPC software.

The software updates will be available at www.newtest.com .

Powertimer update features:

- Replaces Palm PDAs
- CompletePC compatibility
- Update includes:
 - PowertimerPC software
 - USB-to-serial adapter kit
 - Updated Connection unit
- Added features (Quick testing mode)
- Four languages (EN, DE, FR, ES)
- Available also as an update kit

Testing Mode

The USB-to-serial adapter

We have chosen a commercial kit for the connection of the Powertimer to PC. The kit is manufactured by Eminent.

The USB-to-serial adapter kit (according to the manufacturer):

- Compliant with USB 1.1 specs
- Supports RS-232 serial interface
- Bus-powered and plug & play
- Windows 95SE/ME/2000/XP
- At least one available USB port

Updating the system

Please contact your local supplier for further information.

If you have trouble locating your distributor/supplier for further information please contact Newtest Oy.

Availability

The update is available for distribution August 1, 2006.
